Texas Beach Watch Grant

CAPTION:

Ordinance ratifying a grant contract with the Texas General Land Office (GLO) in the amount of \$127,000 to collect and analyze recreational beach water samples for the period of September 1, 2022, through August 31, 2023, appropriating \$127,000, amending the operating budget, and funding one grant position.

SUMMARY:

The Corpus Christi – Nueces County Public Health District (CCNCPHD) is in receipt of Contract No. 21-043-001, work order No. D687 with the GLO to provide financial assistance for expenses to support collection in the amount of \$127,000.00. The CCNCPHD in conjunction with the Texas Beach Watch (TBW) performs collections and analysis of water samples from designated sampling stations and reporting results to the public water quality advisories.

BACKGROUND AND FINDINGS:

The GLO has awarded a contract amendment to CCNCPHD to collect and analyze recreational beach water samples to provide water health safety for biological material. This contract is effective as of September 1, 2022, through August 31, 2025. Every year the GLO awards the Texas Beach Watch Program with financial support which provides for salary, benefits, and expenses.

The TBW collects specimens throughout designated sampling stations in Aransas, Nueces, and San Patricio Counties and monitors waterways. The program monitors these recreational beaches and when Enterococcus bacteria levels in the water exceed the acceptable standards established by the U.S. Environmental Protection Agency (EPA), the GLO works with local governments to issue advisories warning the public not to swim in affected waters.

Water samples are collected and tested throughout the year. During the peak beach season, which runs from May through September, water samples are collected weekly. During the rest of the year samples are collected every two weeks. The one exception occurs in March when weekly sampling is conducted at Gulf of Mexico beaches to coincide with spring break.

The water quality information on the Texas Beach Watch site is updated each time sample results are entered into the database. Local governments post advisory signs provided by the GLO at beach access points where the water quality exceeds acceptable bacterial levels. Once collected base water samples are submitted and analyzed, a repeat sample may be required. Reimbursement for each base sample submitted is \$55.00 and \$70.00 for each repeat sample required. Texas Beach Watch is a program funded by the EPA and the GLO, which administers the program.

ALTERNATIVES:

To deny the Texas Beach Watch Grant; however, this would not be the preferred alternative as this service provides an essential real time report on recreational beach water samples for the community who utilizes these resources.

FISCAL IMPACT:

The grant contract with the GLO appropriates up to \$127,000 to collect and analyze recreational beach water samples for the period of September 1, 2022, through August 31, 2023, amending the operating budget, and funding one grant position. All services conducted such as collection, testing and reporting are 100% compensated by the awarded contract.
