Public Health
Prevent. Promote. Protect.

- Reports show the bulk of the cases in pediatrics averaging 80% of the current active cases.
- Two common types of Flu: A & B
 - Flu A will typically carry stronger symptoms
- Hospitalizations are currently within reported limits
- **We recommend everyone 6 months and older in the United States should get an influenza (flu) vaccine every season**

WE CAN DO THIS

Vaccines.gov Home Find COVID-19 Vaccines Find Flu Vaccines Español CDC

Need help finding a COVID-19 vaccine in the U.S.? Call 1-800-232-0233 (TTY 1-888-720-7489)

Find a COVID-19 vaccine near you

Use Vaccines.gov to find a location near you, then call or visit their website to make an appointment.

Frequently Asked Questions:

Question: I already got the flu, so I don't need the vaccine?

Response: We recommend the vaccine even if you already got the flu. The Flu vaccine contains more strains, so it provides a more robust protection.

Question: What to do if I am sick?

Response: Make sure you are staying away from other people who aren't sick. Wear a mask and wash your hands periodically. Follow all prevention methods we have been practicing with COVID-19.

Question: Where do I get vaccinated?

Response: Most pharmacies will have the flu vaccine on a walk-up basis. Talk to your doctor as well, most doctors' offices will carry the vaccine. Additionally, this is a preventive tool so most insurances will cover the cost and will be no out of pocket.

Question: Does the vaccine give you flu?

Response: No, the vaccine protects you from getting the Flu. We do still have vaccine break through cases, but they are typically short lived, or people will have mild symptoms.
