

Resolution finding that competitive bids are not required for a procurement from Pierpoint Technologies, LLC, dba ActiveG and authorizing the City Manager, or designee, to execute an agreement with ActiveG for \$66,800 to expand the citywide integrated mapping system in Maximo to include additional building and location attributes to improve work order management.

WHEREAS, the City is currently using a spatial presentation platform or “map” developed by ActiveG that seamlessly combines Maximo and geographic information services (“GIS”) into one tool;

WHEREAS, the current system’s GIS software and application modules need to be upgraded and expanded to include additional building and location attributes into the existing map to improve compatibility and functionality with the ActiveG MapEngine program already implemented by the City;

WHEREAS, State law provides that such procurements, as outlined above, are subject to statutory procurement requirements, including competitive bids, unless an exception applies;

WHEREAS, there are two applicable statutory exceptions for this procurement, as follows: Local Government Code, Sections 252.022(a)(7)(D) and (a)(2), as items available from only one source as captive components for existing equipment and to preserve or protect the public health or safety of the municipality’s residents.

Be it resolved by the City Council of the City of Corpus Christi, Texas:

Section 1. The City Council specifically finds that the foregoing statements included in the preamble of this ordinance are true and correct and adopts such findings for all intents and purposes related to the authorization of this procurement.

Section 2. The City Manager, or his designee, is authorized to execute an agreement for \$66,800 with ActiveG to upgrade and expand the citywide integrated mapping system in Maximo to include additional building and location attributes, in order to improve and maximize the use of existing resources for work order management and to ensure the compatibility and continuity of an already proven and functional multi-software system, thereby eliminating the need to develop other platforms, programs, and systems.
