

Backflow Cross Connection Recommendations

Council Presentation
January 31, 2017

Revisions included in Ordinance

1. Allow the City to test and certify delinquent commercial and residential backflow assemblies. This can be done by City staff or third-party as needed.
2. Appropriate charges for testing, repair or replacement to be placed on Customers Utility Bill.

Note:

Testing and certification for residential irrigation backflow prevention assemblies remain at a three year cycle. All commercial assemblies are currently required to be tested and certified on an annual basis.
