Subject: Wastewater Acreage Fee Exemption Request

Mrs. Garza Montalvo,

This email is in response to our phone conversation/email correspondence on November 22, 2016. The email is an official request to have the waste water acreage fee removed from my list of fee necessary to have my replat complete. I believe a request was originally started by Voss Engineering. I am making this request because there is currently zero access to waste water services in the area where my property is. I will be on septic system on this property. The closest tie in to waste water is on Sandy Way approximately 300 ft from my nearest property line. Waste water to this area goes to Purdue Rd. In the email I have included a map of what I believe is the service map, as well as, a copy of my list or replat fees. I am not sure where to obtain further documentation that might be helpful. Additionally a replat was approved for 929 Don Patricio this year (2016), with the exact same situation, no access to city waste water, and needed to be on a septic system. This address is approximately 150 ft. from my property line.

Additionally, I have been making attempts to relieve this issue with the city developmental services for several months. Per our conversation, I request a 90 day extension on the due date/deadline for my fee to be paid in full.

Again, thank you for working with me on this project, you have been very helpful and patient.

Respectfully,

Weston Beseda
