

# La Volla Creek Drainage Channel Excavation (Phase 1)

Council Presentation  
January 16, 2018

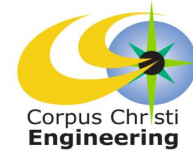

# Project Location

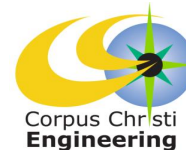

# Project Vicinity

# Project Scope

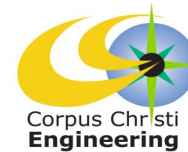

This project clears vegetation and excavates the channel increasing capacity and lowering surface water elevation of La Volla Creek during storm events. The work includes:

- Excavation of approximately 170,000 Cubic Yards of channel overbanks
- Clearing trash and debris out of channel bottom
- Grading a small ravine
- Construction of an outfall structure
- Placement of excess material

This project requires coordination with the USACE. No excavation is planned within the channel and existing wetlands will be avoided.

# Project Schedule

| 2017       |   |   |              |   |   | 2018 |   |   |   |   |   |
|------------|---|---|--------------|---|---|------|---|---|---|---|---|
| N          | D | J | F            | M | A | M    | J | J | A | S | O |
| Bid/ Award |   |   | Construction |   |   |      |   |   |   |   |   |

Project Construction Estimate  $\approx$  8 Months

Projected Schedule reflects City Council award in January 2018 with anticipated completion in September 2018.
